

The **CENTRIFUGE** **MOBILE UNIT**

Why not consider a trial at your farm?

- Because the type of manure is the determining factor of the yield efficiency of a mechanical separator technology;
- Because each business has its own manure management plan;
- Because it is imperative to have solid data in order to establish an accurate «PAEF» and obtain a cost estimate of a treatment project;
- Because it is important to be able to assess how well equipment performs before purchasing.

IRDA is offering the centrifuge mobile unit to allow you to give it a trial run in your installations.

- Laboratory analyses of raw manure and of its solid and liquid fractions;
- Dimensioning of the equipment needed;
- Operation costs.

An investment for concrete results
